Title	Risk Factors Associated with Work-Related Musculoskeletal Disorders Among Floor-Sitting Precision Handicraft Workers
Source type	Paper
Link	DOI: 10.1007/s00420-021-01817-5
Craft applicability	Wood (Delhi ivory-to-hardwood carving tradition)
Primary Why-theme	7. Posture, Grip and Body Mechanics
Process stage	Phase III: Fine Articulation & Finishing
Questions answered	Why does prolonged hunched, seated micro-carving strain the back, wrists and eyes?
Evidence level	E3
Relevance note	The study on floor-sitting precision handicraft workers directly supports the Delhi report's observation that artisans work in prolonged seated or hunched postures during hand-controlled chiseling and micro-detail carving, leading to strain in the lower back/spine, wrists/fingers and eyes.
