Title	Enhancing the Tribological Performance of Tool Steels for Wood-Processing Applications: A Comprehensive Review
Source type	Paper (open access review)
Link	https://doi.org/10.3390/met13081460
Craft applicability	Wood (dense hardwoods — ebony, sandalwood)
Primary Why-theme	6. Tools and Tool-Material Interaction
Process stage	Phase II & III: Shaping and fine carving
Questions answered	Why does carving dense hardwood like ebony dull tool edges faster, requiring more frequent sharpening?
Evidence level	E3
Relevance note	Confirms that tool wear during wood machining is directly driven by wood hardness and density, explaining why ebony demands more frequent use of the Shil and supporting the report's recommendation for modern synthetic sharpening systems.
