Title	Workplace Exposure to Wood Dust and the Prevalence of Wood-Specific Sensitization
Source type	Paper (review)
Link / File	https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6881851/
Craft applicability	Wood (walnut — the primary material used in Khatamband)
Primary Why-theme	8. Dust and Respiratory Exposure
Process stage	Cutting, grooving, carving (all stages generating walnut wood dust)
Questions answered	Why do artisans working with walnut wood report severe breathing issues from wood dust exposure?
Evidence level	E3
Relevance note	This review specifically documents walnut (Juglans species) dust as a confirmed cause of occupational asthma and IgE-mediated respiratory sensitization among exposed woodworkers, directly explaining the report's statement that Khatamband artisans face severe breathing issues due to wood dust, and supporting the proposed dust collector installation.
