Title	Risk Factors Associated with Work-Related Musculoskeletal Disorders Among Floor-Sitting Precision Handicraft Workers
Source type	Paper
Link / File	DOI: 10.1007/s00420-021-01817-5
Craft applicability	Bamboo (seated detail carving and surface refinement stages)
Primary Why-theme	7. Posture, Grip and Body Mechanics
Process stage	Detail carving (Nakshekari-equivalent fine work) and surface refinement
Questions answered	Why does prolonged seated precision carving work strain the back, neck and shoulders of bamboo root artisans?
Evidence level	E3
Relevance note	Indian occupational study of floor-seated precision handicraft workers found high prevalence of neck, back and knee MSD symptoms linked to sustained posture during fine detail work, directly applicable to the sustained precision carving stages of bamboo root sculpture.
