Title	Comparative Analysis of Methods for Plastification of Solid Wood
Source type	Paper
Link / File	https://www.researchgate.net/publication/312498200
Craft applicability	Wood (Kallakurichi diesel/solvent-based fiber softening before fine detailing)
Primary Why-theme	11. Product Function, Use and Performance
Process stage	Diesel addition (post rough-shaping softening step)
Questions answered	Why does applying a solvent (diesel, or the proposed isopropyl alcohol/water alternative) to wood reduce the force needed for fine carving and reduce cracking/splintering?
Evidence level	E3
Relevance note	Explains that moisture/solvent content directly governs the plastic (mechanical) state of wood, reducing the force required to shape it without breaking, the same mechanism the report describes for diesel-softened wood.
