Title	A Review of Wood Machining Literature with a Special Focus on Sawing
Source type	Paper (open access review)
Link / File	https://bioresources.cnr.ncsu.edu/resources/a-review-of-wood-machining-literature-with-a-special-focus-on-sawing/
Craft applicability	Bamboo (Battal chisel edge maintenance via Selet Pathar and San Pathar)
Primary Why-theme	6. Tools and Tool-Material Interaction
Process stage	Tool maintenance (ongoing, across all carving stages)
Questions answered	Why does regular sharpening of the Battal chisels reduce the physical effort required to carve dense bamboo root?
Evidence level	E3
Relevance note	Confirms cutting force is inversely proportional to tool sharpness, explaining why the report identifies inconsistent access to quality sharpening stones (Selet Pathar, San Pathar) as a key tool maintenance challenge.
