Title	Improvement in Wood Bonding Strength of Poly (Vinyl Acetate-Butyl Acrylate) Emulsion by Controlling the Amount of Redox Initiator
Source type	Paper (open access)
Link / File	https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5793587/
Craft applicability	Bamboo (Fevicol + water surface treatment for pore sealing)
Primary Why-theme	10. Failure, Repair and Quality
Process stage	Sub-step 3.4: Surface Treatment
Questions answered	Why does applying a Fevicol (PVA-based adhesive) and water mixture strengthen the bamboo root surface and seal its pores?
Evidence level	E3
Relevance note	Studies how PVA-based emulsion adhesives penetrate and bond porous wood/fiber surfaces, providing a chemical basis for the report's own surface-treatment step of applying diluted Fevicol to strengthen and seal the bamboo root's surface pores before sun-drying.
