Title	Modeling of Woodworkers' Exposure to Occupational Noises by Integrating Frequency Spectra Generated by Power Tools: A Pilot Study
Source type	Paper
Link / File	https://www.researchgate.net/publication/344267440
Craft applicability	Wood (powered hand tools, including drill machines — matches the Handpiece)
Primary Why-theme	8. Noise
Process stage	Phase III: Fine Articulation (Handpiece use)
Questions answered	Why does using a powered rotary tool like the Handpiece expose the artisan to harmful noise levels?
Evidence level	E3
Relevance note	Measures personal noise exposure (~80 dBA, peaks near 1–4 kHz) from power tools including drill machines — closely matching the electric Handpiece used in Delhi's fine-detailing phase.
