Title	The Influence of Hand Tool Design on Hand Grip Strength: A Review
Source type	Paper (review)
Link / File	https://www.researchgate.net/publication/336677500
Craft applicability	Wood (Khatamband chisel and saw handles — Tesa, Zaaban Bari)
Primary Why-theme	7. Posture, Grip and Body Mechanics
Process stage	Component cutting and Rangdai carving/engraving
Questions answered	Why would rubberized, contoured tool handles reduce grip effort and fatigue during repetitive cutting and chiseling?
Evidence level	E3
Relevance note	Confirms handle diameter, material and contour are the most significant hand-tool design factors affecting grip strength and fatigue, directly supporting the report's proposal for rubberized/contoured grips on chisels and saws to reduce strain during repetitive cutting.
