Title	A Review of Wood Machining Literature with a Special Focus on Sawing
Source type	Paper (open access review)
Link / File	https://bioresources.cnr.ncsu.edu/resources/a-review-of-wood-machining-literature-with-a-special-focus-on-sawing/
Craft applicability	Wood (Khatamband chisel/saw edge maintenance via Sil sharpening stone)
Primary Why-theme	6. Tools and Tool-Material Interaction
Process stage	Tool maintenance (ongoing, across all cutting/carving stages)
Questions answered	Why does maintaining a sharp edge on the Zaaban Bari saw and Tesa chisels reduce the physical force needed to cut walnut wood cleanly?
Evidence level	E3
Relevance note	Confirms that cutting force is inversely proportional to tool sharpness, directly explaining why the Sil (sharpening stone) is described in the report's tool annexure as essential for maintaining sharp edges and ensuring clean, efficient cuts.
