Title	Efficacy of Shellac-Based Varnishes for Protection of Wood Against Termite, Borer and Fungal Attack
Source type	Paper
Link / File	https://www.researchgate.net/publication/277574155
Craft applicability	Bamboo (optional varnish coating for final gloss and protection)
Primary Why-theme	11. Product Function, Use and Performance
Process stage	Sub-step 3.5: Final Finishing
Questions answered	Why would applying varnish to a finished bamboo root sculpture improve its protection and longevity beyond the natural finish?
Evidence level	E3
Relevance note	An Indian Institute of Wood Science study found shellac-based varnishes gave up to 100% termite resistance for 6 months and improved fungal/borer resistance, supporting why varnish is offered as an optional protective final finish, while explaining why many artisans still prefer the natural unvarnished finish for aesthetic reasons.
