Title	Drying and Control of Moisture Content and Dimensional Changes
Source type	Technical report / handbook chapter
Link / File	https://www.researchgate.net/publication/285852322
Craft applicability	Bamboo (sun-drying after Fevicol + water surface treatment)
Primary Why-theme	10. Failure, Repair and Quality
Process stage	Sub-step 3.4: Surface Treatment (sun-drying step)
Questions answered	Why must the bamboo root sculpture be sun-dried after surface treatment, and why could uneven drying introduce new cracking risk?
Evidence level	E3/E4
Relevance note	Explains that wood and lignocellulosic materials continuously exchange moisture with their environment and that uncontrolled or uneven drying leads to dimensional change and cracking, relevant to the report's sun-drying step following the Fevicol and water surface treatment. Applied here to bamboo root as a general lignocellulosic-material principle, not a bamboo-specific test.
